SPRING REVERB^{MKII}

SPACEXPANDER Spring Reverb

A Rack Extension from Ekssperimental Sounds Studio and Past To Future Reverbs.

SPACEXPANDER is based on impulse response samples carefully recorded on tape by Past To Future Reverbs and then combined with a tube style amplifier, a dual mode VCF, a dry/wet control and output level control in this Rack Extension by Ekssperimental Sounds Studio.

On the back of the unit there is a CV input to control the input gain, the cut off frequency of the filter and the dry/wet mix and a mini browser to select any of the 15 (A - O) included impulse responses from the Past To Future Reverbs IR-pack KING TUBBY SPRING REVERB VOL. 2 (Fisher K-10 SpaceXpander) - The selected sample is also indicated on the front panel at the left edge of the patch display.
