TAPEFUNK M10 ^{v1.1.0}

TAPE RECORDER

TAPEFUNK M10

A Rack Extension from Ekssperimental Sounds Studio and Past To Future Reverbs.

TAPEFUNK M10 is based on impulse response samples carefully recorded by Past To Future Reverbs combined with hiss sampled from the original unit and DSP modelling of tube type gain stage, tape style compression and limiting in this Rack Extension by Ekssperimental Sounds Studio.

1.1.0 Update introduces the possibility to open the device and touch some of the parameters “under the hood”.

From left to right:

- Tighten Response - increase the decay rate of the IR response.
- Wobble Depth & Speed, introduces fluctuations to the tape speed (version 1.0.1 di not have any fluctuations, keep at zero for original behaviour)
- Hiss Drive - the hiss can now be boosted for additional lofi-vibes.
- EQ Curve 1,2,3,4: four different eq resposes simulating different types of tapes
- Compression Threshold adjust at what level the compression kicks in
- TUBE DRIVE adjust the amount of distortion caused by tubes

On the back of the unit there is a CV input to control the input gain for modulation of the amplitude.

We hope you will enjoy this soulful tape machine as much as we do!
