## Introduction

Evolution is a generative player that uses seeded, deterministic random numbers. These numbers are locked against the transport timeline, which allows replay, looping, and repeatable pattern-to-track functionality. Rhythmic pattern generation and sequence variations are rooted in the Schillinger System of Musical Composition.

Front Panel

Back Panel

## Main

## RUN $\square$ RATE $1 / 16$ SEED $\square \square$ 9e8UuXQWMA

## Run

```
RUN
```

Start and stop the sequencer's run state.

## Rate

```
RATE 1/16
```

The duration that each box in the sequencer corresponds to. Available rates: 32/4, 28/4, 24/4, 20/4, 16/4, $12 / 4,8 / 4,7 / 4,6 / 4,5 / 4,4 / 4,7 / 8,3 / 4,5 / 8,2 / 4,7 / 16,5 / 8 \mathrm{~T}, 3 / 8,4 / 8 \mathrm{~T}, 5 / 16,1 / 4,3 / 16,2 / 8 \mathrm{~T}, 1 / 8,1 / 8 \mathrm{~T}, 1 / 16,1 / 16 \mathrm{~T}$, 1/32, 1/32T, 1/64, 1/128.

One sequencer unit equals the set duration.

## Selection and Pattern

```
seED DDDI
```

This sets the seed currently in use. There are up to 4 text slots used to generate a pattern. This doubles as the pattern selection for the main sequencer's pattern automation.

Pattern Selection Automation Lane

## Seed Text Entry

## 9e8UuXQWMA

Enter any text to be used to seed the random number generator.

## Randomizer

```
\square
```

Clicking on the dice will generate a random string in the seed text entry.

## Rhythm

## X Y Z Parameters

## 7 y 4 z 3

Three number parameters $\mathrm{X}, \mathrm{Y}$, and Z are used in various rhythmic generation algorithms. Each has the range 1 to 15.

## Mode Selection

## Interfere 7-4-3

## Mode only options

| Modes 5-3-2 |  | Interfere 5-3 |
| :--- | :--- | :--- |
| Interfere $X-Y$ |  | Interfere 5-3-2 |
| Interfere $X-Y-Z$ |  | Fraction 5-3 |
| Fraction $X-Y$ |  | Square 5-3 |
| Square $X-Y$ |  | Square 5-3-2 |
| Square $X-Y-Z$ |  | Cube 5-3 |
| Cube $X-Y$ |  | Cube 5-3-2 |
| Cube $X-Y-Z$ |  | Random 5-3 |
| Random $X-Y$ |  | Random 5-3-2 |
| Random $X-Y-Z$ |  |  |

The mode drop-down menu presents the different rhythmic algorithms available. The top-most item on the main menu ( Modes 5-3-2 $\quad$ ) presents the different modes for the currently selected X-Y-Z. The example shown has values of 5,3 , and 2 . Choosing one of these sub-items changes the mode, but not the $X-Y-Z$ values.

Other items on the main drop-down (shown with $X-Y$ or $X-Y-Z$ ) will change the mode and the current $X, Y$, and $Z$ values. The $X, Y, Z$ preset values available in the sub-menu are known to have interesting rhythmic properties together for that mode.

## Rhythm Lanes

The top red section shows the rhythm parameters $\mathrm{X}, \mathrm{Y}$ and Z . In the example above, we see values 5 on the top, 3 in the middle, and 2 on the bottom.

The top of the orange section is the result rhythm of the $X, Y$, and $Z$ parameters and the selected mode. In this example, we have the result of Interfere 5,3, and 2, which starts with unit durations $2,1,1,1,1,2,1,1,2,2 \ldots$

The bottom on the orange section is a grid of 1-unit lengths.

## Interference Patterns

## Interfere X-Y

Interfere 3-2, Length $=6$

Interfere 5-3, Length $=15$

Overlay the durations of each base rhythm $X$ and $Y$ on top of each other to produce a new rhythm. Length is the least common multiple of $X$ and $Y$.

## Interfere X-Y-Z

Interfere 5-3-2, Length $=30$

Interfere 7-4-3, Length $=84$
Overlay the durations of each base rhythm $\mathrm{X}, \mathrm{Y}$, and Z on top of each other to produce a new rhythm. Length is the least common multiple of $\mathrm{X}, \mathrm{Y}$ and Z .

## Fraction X-Y

Fraction 5-3, Length $=25$

Overlay the durations of base rhythm $X$ with multiple copies of $Y$, each $Y$ copy resynced at the next $X$. Length is $X$ squared.

## Polynomial Expansions

Square $X-Y$

Square 2-1, Length $=9$

Square 5-3, Length $=64$

Polynomial expansion of $(X Y)$ * $(X Y)$ without simplification.
$\left(X^{*} X, X^{*} Y, Y^{*} X, Y^{*} Y\right)$. Length is $(X+Y)^{\wedge} 2$
Square $\mathrm{X}-\mathrm{Y}-\mathrm{Z}$

Square 2-1-1, Length $=16$

Polynomial expansion of ( $X Y Z$ ) * $(X Y Z)$ without simplification. $\left(X^{*} X, X^{*} Y, X^{*} Z, Y^{*} X, Y^{*} Y, Y^{*} Z, Z^{*} X, Z^{*} Y, Z^{*} Z\right)$. Length is $(X+Y+Z)^{\wedge} 2$

## Cube X-Y

Cube 2-1, Length $=27$

Polynomial expansion of $(X Y)$ * $(X Y){ }^{*}(X Y)$ without simplification. $\left(X^{*} X^{*} X, X^{*} X^{*} Y, X^{*} Y^{*} X, X^{*} Y^{*} Y, Y^{*} X^{*} X, Y^{*} X^{*} Y, Y^{*} Y^{*} X, Y^{*} Y^{*} Y\right.$ ). Length is $(X+Y)^{\wedge} 3$

Cube X-Y-Z

Cube 2-1-1, Length $=64$

Cube 1-1-2, Length $=64$
Polynomial expansion of $(X Y Z){ }^{*}(X Y Z){ }^{*}(X Y Z)$ without simplification.

## Random

Random X-Y

Random 2-1
$X$ and $Y$ chosen randomly.
Random X-Y-Z

Random 5-3-2
$X, Y$ and $Z$ chosen randomly.

## Steps

Sets the length of the sequence. Rhythm parameters $X, Y, Z$, and rhythm modes will always have a 'natural' length at which they repeat. The 'Default' value of steps will use this natural value. Setting a specific value will override by clipping or extending.

Interfere 5,3,2 with Default steps, which $5 \times 3 \times 2=30$

Interfere 5,3,2 with 16 steps

Interfere 5,3,2 with 64 steps

Steps are limited to 192. Any Rhythmic patterns with natural lengths larger than 192 (Such as Cube 9,9,9 = 19683) will be clipped to 192.

## Density

Density assigns the percentage of chance that any note is active.

Active notes are lighter in color and will have a corresponding note activated in the green note area.

Density 25\%

Density 50\%

Density 75\%

Density 100\%

## Splits

Each note can be divided further creating interesting ratcheting behavior.

## Split Density

```
SPLIT 29%
```

Density assigns the percentage of chance that any note is split.

Split Density 30\%

Split Density 60\%

## Split Mode

## \% Rate

Split mode drop-down menu determines how the notes may be split.

| Rate | Split on the 1-unit grid. |
| :--- | :--- |
| 2,4 | Half and Quarters |
| 2,3 | Half and Thirds |
| Even | Even values $2,4,6,8,10$ |
| Odd | Odd values $3,5,7,9$ |
| $2-10$ | All values $2,3,4,5,6,7,8,10$ |

[1111!11!11111111

Rate

2,4

2,3

Even

Odd

2-10

## Note Mod

## NOTE <br> MOD 7

Each successive note split will increment or decrement the note value. These are snapped to the selected scale.

## Velocity Mod

## 62\%

Each successive note split will multiply the note velocity. This can create a fade / echo type effect.

## Note and Velocity

Sets the note and velocity ranges for note generation.

| Velocity Range | $\checkmark$ | 1 <-> 127 |
| :---: | :---: | :---: |
| Note Range | - | 42 <-> 96 |
|  |  | 53 <-> 80 |
| $0 \%$ NOTE N 2-10 VEL |  |  |
| 0 62\% \# |  | $64$ |

## Scale Options

## Custom

## 

Custom scales can be created by enabling and disabling notes.

## Repeats and Variations

| REPEATS | SELECT | VARIATION | ROTATION | HISTORY |
| :---: | :---: | :---: | :---: | :---: |
| 4 | $3: 4$ | Shuffie | 0 | 0 |

These control the changing of the patterns

## Repeats

## REPEATS

4
The number of times the sequence will repeat before switching to the next generated sequence.. Zero will repeat forever.

Repeats 2

Repeats 3

Repeats 4

Repeats 0

## Variation Select

## SELECT <br> 3:4

Select which repetitions will have a variation.

| Off | None |
| :---: | :---: |
| 2:2 | 2nd out of every 2 |
| 2:3 | 2nd out of every 3 |
| 3:3 | \begin{tabular}{llllllll}
\hline
\end{tabular} <br> 3rd out of every 3 |
| 2:4 | 2nd out of every |
| 3:4 | 3rd out of every 4 |
| 4:4 | 4th out of every 4 |
| 2+ | 2nd and above |
| 3+ | 3rd and above |
| 5+ | 5th and above |
| Xor | Binary xor of bits in the sequence index. |
| Rand | Random selection |

## Variation

VARIATION
Shuffle
Each variation that is selected will be modified with the variation parameter.

| Rotate | Rotate the variation sequence a number of steps. Uses the Rotation parameter. |
| :---: | :---: |
| Rotate N | Rotate the variation sequence a number of steps. Uses the Rotation parameter. Each successive variation is rotated further. |
| Shuffle | Shuffle the variation sequence. |
| Shuffle N | Shuffle the variation sequence. Each successive variation is shuffled again. |
| Reverse | Reverse the variation sequence. |
| Inverse | Invert the density value of each note in the variation sequence. |

## Rotation

ROTATION
0
Parameter for the Rotation Variations.

## Rotation 1

## Rotation 2

Rotation 3

Rotation-1

## History

## HISTORY

0
Each new sequence can be influenced by past sequences. A setting of zero will not use any previous history. A max setting of five will use the five previous sequences creating slowly morphing sequences.

History 0

History 2

History 5

## CV Connections

```
OUTPUTS
    GATE
    NOTE
    PITCH
    RAND }
    RAND 2
    RAND 3
RAND 4
```

## Gate \& Note

```
(0) GATE
(0) NOTE
```

Classic Gate and Note CV output.

## Pitch

```
(0) PITCH
```

Note Pitch for controlling oscillator pitches in synth devices that have oscillator CV Pitch inputs, or allow controlling oscillator pitch via a Modulation Matrix.

## Rand 1-4

```
(0) RAND }
    RAND }
    RAND 3
    RAND }
```

Deterministic random CV curves that are locked to the patterns, transports, and variations. These are generated from the seed values just like notes are.
